SHEET MATERIALS FOR ORTHOPAEDIC USE

Stanley Smith & Co Plastics Ltd., Isleworth, have engaged in many years of close collaboration and research in orthopaedics to perfect a range of sheet materials for the manufacture of orthopaedic splints and supports of all types.

All these materials are physiologically inert and two of them are pink in colour for the best cosmetic appearance. All three are easily fabricated manually to give light weight, strong, non-irritant, aesthetically pleasing orthopaedic devices.
